**Dear Sirs,**

In the context of the implementation of the project "Elaboration of the feasibility study on the communication between the national registers" initiated by the Information Society Development Institute of the of the Republic of Moldova and implemented by the company DATAB &r.o. in the framework of the Aid for Trade Program - Moldayska Republika "Vypracovani stude proveditelnosti pro komunikaci mezi narodnimi registry", IDSI, as the initiator of this project, undertook a series of actions to ensure the good conditions for carrying out the works, involving several actors from Moldova, by disseminating information about the project and permanent organizational support. Moldovan partners were interested in how the semantic interoperability between national systems and registers is ensured in the Czech Republic. In particular, the Electronic Governance Agency has requested support for a working visit to the appropriate institutions in the Czech Republic in order to be able to know more closely and in detail Czech practice on semantic interoperability and to exchange experience on this subject.

The Information Society Development Institute is interested in contributing to ensuring interoperability in the public services of the Republic of Moldova and, in this context, is pleased to kindly ask to provide the necessary support for participation of two IDSI researchers in the working visit, together with theegation of the eGovernment Agency,

Respectfully

Dr. Igor Cojacaru, Director
