Dear Jiri,

I am pleased to send you Eurofins Cerep Quote 100031383 corresponding to your request below. I hope it proves satisfactory.

For your information, the COMT assay (ref.457) is unavailable for the moment (we are currently optimizing this assay) and has not been added to this quote .

I also attached our Compound Submission Form and our shipping label :

- Submission Form: we would be grateful if you could complete it and return an electronic copy by e-mail to Customer Support in order for the compounds to be registered correctly into our database.
Please also include a hard copy with the shipment.

- Shipping Label: please choose the appropriate label (Cerep France) and stick it on the package. Please ensure that the Cerep study number is clearly indicated as this allows our Compound Reception team to identify your compounds quickly and efficiently.
This will have a positive impact on your study timelines.

Could you please let us know the test concentration to be used in this study ? If 10µM is fine, 85µl of a 10mM DMSO solution or 1mg of pre-weighed solid (assuming a molecular weight ~500g/mol) per compound will be sufficient to perform the 10 first assays and 110µl of a 10mM DMSO solution or 1mg of pre-weighed solid of your other compound will be sufficient to perform the 17 remaining assays.

We will initiate the study once we receive the test samples, the test concentration as well as your written approval (ideally a purchase order).

Do not hesitate to contact us if we can be of any assistance.

With Kind regards,

Karine
