the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million (1990–1999) and is projected to increase by a further 1.5 million by 2010 (Office of National Statistics 2000).

There is a growing awareness of the need to develop strategies to meet the needs of the ageing population. The Department of Health (2000) has identified the need to develop a 'new paradigm' of care for the ageing population, one that is based on the concept of 'active ageing'.

The concept of 'active ageing' is defined by the World Health Organization (WHO) as:

...the process of developing and maintaining the functional abilities that enable people to participate in society to the greatest extent possible as they age (WHO 1999).

The WHO (1999) also states that 'active ageing' is a process that involves:

...the optimization of opportunities for participation in social, economic, cultural and spiritual activities and the development of the individual's physical, mental and social capacities (WHO 1999).

The WHO (1999) also states that 'active ageing' is a process that involves:

...the development of the individual's physical, mental and social capacities, and the optimization of opportunities for participation in social, economic, cultural and spiritual activities (WHO 1999).

The WHO (1999) also states that 'active ageing' is a process that involves:

...the development of the individual's physical, mental and social capacities, and the optimization of opportunities for participation in social, economic, cultural and spiritual activities (WHO 1999).
