Dear,

we had a disaster happening during the last night in CMS, where the rooms were flooded by water.

There for we would like to kindly for the instrument inspection, to make sure nothing was actually affected. Also, we need a written summary of the instrument status because of insurance.

Please ask also the UPS-delivering company for the inspection.

The water not going from the ceiling over the instrument, however, it did in surrounding rooms. There was about 3cm of water on the source side on the floor. I think doing this during Andreas's scheduled visit next week should be fine, but it might slightly extend it.

Best regards,

P.S. One more quick thought: there are 230V power splitters under the instrument. I believe they were not affected this time, but we should make sure they are elevated for the next time.
