the 1990s, the number of people in the United States who are 65 years of age or older has increased by 50% (U.S. Census Bureau, 1997). The number of people aged 65 and older is projected to increase to 20% of the total population by the year 2020 (U.S. Census Bureau, 1997). The increase in the number of people aged 65 and older is due to the increase in life expectancy. The life expectancy at birth in the United States has increased from 47 years in 1900 to 75 years in 1990 (U.S. Census Bureau, 1997). The increase in life expectancy is due to a number of factors, including improvements in medical care, nutrition, and living conditions. The increase in life expectancy has led to a number of challenges for society, including the need for more retirement and health care resources. The increase in the number of people aged 65 and older has also led to a number of changes in the labor force. Many people aged 65 and older are now working, either full-time or part-time. This has led to a number of changes in the labor force, including the need for more flexible work schedules and the need for more training and education for older workers. The increase in the number of people aged 65 and older has also led to a number of changes in the housing market. Many people aged 65 and older are now living in retirement communities or assisted living facilities. This has led to a number of changes in the housing market, including the need for more retirement and assisted living facilities. The increase in the number of people aged 65 and older has also led to a number of changes in the social service system. Many people aged 65 and older are now receiving social services, such as meal delivery and transportation. This has led to a number of changes in the social service system, including the need for more social service resources. The increase in the number of people aged 65 and older has also led to a number of changes in the health care system. Many people aged 65 and older are now receiving health care services, such as long-term care and home health care. This has led to a number of changes in the health care system, including the need for more health care resources. The increase in the number of people aged 65 and older has also led to a number of changes in the economy. Many people aged 65 and older are now working, either full-time or part-time. This has led to a number of changes in the economy, including the need for more flexible work schedules and the need for more training and education for older workers. The increase in the number of people aged 65 and older has also led to a number of changes in the labor force. Many people aged 65 and older are now working, either full-time or part-time. This has led to a number of changes in the labor force, including the need for more flexible work schedules and the need for more training and education for older workers. The increase in the number of people aged 65 and older has also led to a number of changes in the housing market.
