SUREVISION 3.0 CAMERAS IN STANDARD AND PRESSURIZED MODELS

Product Features

- Surevision 3.0 Technology, Including:
 - 130dB Wide Dynamic Range (WDR)
 - Advanced Low Light Down to 0.03 LUX, Anti-Bloom Technology, 3D Noise Filtering, Enhanced Tone Mapping
- Up to Full HD 1080p and up to 60 Images per Second
- Full Suite of Built-In Analytics Including AutoTracker, Adaptive Motion Detection, Abandoned Object, and More.
- Defog Mode Provides Three Levels of Fog Removal Within the Image for Improved Image Quality During Bad Weather Conditions
- Vivid Mode Can be Turned On/Off to Drastically Improve the Image Contrast and Color Saturation
- Electronic Image Stabilization (EIS)
- Pan/Tilt and Enclosure with Integrated Optics Package (IOP) or Pressurized Integrated Optics Cartridge (IOC)
- Dual Stream H.264 IP Video with Smart Compression
- Vari-Zoom IR Illuminator Option with 200 Meter Range
- 16 Preset Tours, 256 Presets, 32 Window Blanks, 8 Patterns, 8 Scans

SureVision 3.0
A Pelco by Schneider Electric Technology

- Integrated Window Wiper with Configurable Delay and Shut-Off (ES6230-1x Models)
- ONVIF Profile S, Profile G, and Profile Q Conformant
- 360° Continuous Pan Rotation at 140° per Second
- SFP Port

Top of the Line IP Performance

Pelco's iconic Esprit® Series positioning system provides best-in-class image quality and pan/tilt performance. Esprit Enhanced provides the total package of impressive image quality, valuable software features, and time-tested pan/tilt performance suitable for any installation environment.

Full High Definition SureVision 3.0 Cameras

Esprit Enhanced has long provided a Full HD 1080p 30x optical zoom camera but with Pelco's latest product evolution a powerful new SureVision 3.0 enabled camera is now available featuring 130dB of True Wide Dynamic Range and low light performance up to twenty times better than past Esprit models. The new SureVision 3.0 camera is available in either a standard or pressurized 30x optical zoom module that delivers market leading image quality for even the toughest outdoor environments. Paired with Pelco's illuminator modification, the camera ensures that image quality is top-of-the-line, even on the darkest of nights.

Image Enhancement Features

Esprit Enhanced has historically packed in many features that enhance the total value of the system, and with the new SureVision 3.0 cameras, even more value has been added. Since its inception, Esprit Enhanced has had a full suite of built in video analytics, 32 window blanking privacy zones, and electronic image stabilization.

Standard IP Ethernet Connection and Integrated Transmission

Options via a small form-factor pluggable transceiver (SFP port). This may include Fiber, Ethernet over Coax, and UTP Extension. In addition to the vastly improved low light and wide dynamic range performance, the new SureVision 3.0 cameras now provide Image Defog, five new White Balance modes, and the popular Vivid Imaging Mode. Three levels of Image Defog are now available helping enhance images on foggy or rainy days. New White Balance modes allow the user to overcome difficult lighting conditions caused by external sources such as Sodium Vapor lamps and the Vivid Imaging mode provides an option for automatically increased color saturation and sharpening when enabled.

Proven Performance and Reliability

Esprit Enhanced brings together the very best in enclosure design, PTZ mechanics, and receiver technologies to produce the industry's leading high-speed camera system. Installed around the world for more than 16 years, Esprit Enhanced has been constantly updated to provide the latest pan/tilt and imaging performance. The camera is easy to install, easy to use, and highly reliable.

VMS Integration

Esprit Enhanced easily connects to Pelco IP and hybrid video systems such as VideoXpert, Endura 2.0 (or later), and Digital Sentry 7.3 (or later). The camera is also compatible with Digital Sentry NVS (DS NVS), a full-featured video management software, which is available as a free download at www.pelco.com. DS NVS includes four free Pelco IP licenses and allows for the management of video from up to 64 cameras.

ESPRIT ENHANCED POSITIONING SYSTEM

Pelco's Esprit® Enhanced Positioning System features a pan/tilt, enclosure, and either an Integrated Optics Package (IOP) or a pressurized Integrated Optics Cartridge (IOC) in a single, easy-to-install system. Options include IOP with or without wiper and IOC models with wiper.

A powder-coated, aluminum construction makes the Esprit Enhanced Series ideal for either indoor or outdoor applications. The system has an absolute operating temperature range of -45° to 60°C (-50° to 140°F). Within two hours after power-up, the entire unit can de-ice and be operational from a temperature of -25°C (-13°F).

The Esprit Enhanced Series variable pan and tilt speeds range from 0.1 to 80 degrees per second in manual pan mode, and 0.1 to 40 degrees per second in manual tilt. Pan preset and turbo speeds are 140 degrees per second. Tilt preset speed is 140 degrees per second.

The Esprit Enhanced Series system's IOC contains dry nitrogen pressurized to 10 psig, which protects the environment inside the cartridge eliminating internal condensation and corrosion. Sensors are strategically placed in the cartridge to monitor pressure, which is then displayed on the Web UI. The IOC is factory assembled and installed in Esprit Enhanced Series systems. All labor intensive procedures of setting up the camera, lens and charging the unit with dry nitrogen are eliminated. The miniature size of the cartridge decreases the future need for maintenance and increases the overall reliability of the pressurized unit.

Esprit Enhanced is available with a window wiper. The wiper is completely integrated into the enclosure and does not interfere with the viewing range of the system. The wiper can be configured to delay between wipes and to automatically shut off after a specified period. The wiper design also allows for easy replacement of the wiper blade. A built-in heater, window defroster/defogger, and sun shroud are standard features on Esprit Enhanced units, which also includes an open collector auxiliary output to control external devices.

The systems are available with a universal mains power supply. The Esprit Enhanced Series also has a power-up recovery mode that allows the user to specify what operation the system will resume whenever the power is cycled.

Electronic Image Stabilization (EIS)

Electronic image stabilization (EIS) is a feature of the camera that can help compensate for some frequencies of vibration. In all cases, care should be taken to ensure that any positioning system is mounted to a rigid location.

The default for EIS is OFF. The user can turn EIS ON if vibration is affecting image quality. Although EIS can reduce the impact of vibration on image quality, it cannot correct for all levels of vibration. Other measures should be taken to isolate the camera from the source of the vibration or to seek a more rigid mounting location.

PELCO ANALYTICS BEHAVIORS

The Esprit Enhanced Series includes nine user-configurable behaviors. The camera is capable of running up to three behaviors simultaneously; although, the number of behaviors is limited to the available processing power of the camera and the type of analytic being used.

- **Abandoned Object:** Detects objects placed within a defined zone and triggers an alarm if the object remains in the zone longer than the user-defined time allows. An airport terminal is a typical installation for this behavior. This behavior can also detect objects left behind at an ATM, signaling possible card skimming.
- **Adaptive Motion Detection:** Detects and tracks objects that enter a scene and then triggers an alarm when the objects enter a user-defined zone. This behavior is primarily used in outdoor environments with light traffic to reduce the number of false alarms caused by environmental changes.
- **AutoTracker:** Detects and tracks movement in the field of view. When the AutoTracker behavior is configured, the system automatically pans and tilts to follow the moving object until the object stops or disappears from the monitored area.
- **Camera Sabotage:** Detects contrast changes in the field of view. An alarm is triggered if the lens is obstructed by spray paint, a cloth, or a lens cap. Any unauthorized repositioning of the camera also triggers an alarm.
- **Directional Motion:** Generates an alarm in a high traffic area when a person or object moves in a specified direction. Typical installations for this behavior include an airport gate or tunnel where cameras can detect objects moving in the opposite direction of the normal flow of traffic or an individual entering through an exit door.
- **Loitering Detection:** Identifies when people or vehicles remain in a defined zone longer than the user-defined time allows. This behavior is effective in real-time notification of suspicious behavior around ATMs, stairwells, and school grounds.
- **Object Counting:** Counts the number of objects that enter a defined zone. This behavior can be used to count the number of people at a store entrance/exit or inside a store where the traffic is light. This behavior is based on tracking and does not count people in a crowded setting.
- **Object Removal:** Triggers an alarm if an object is removed from a user-defined zone. This behavior is ideal for customers who want to detect the removal of high value objects, such as painting from a wall or a statue from a pedestal.
- **Stopped Vehicle:** Detects vehicles stopped near a sensitive area longer than the user-defined time allows. This behavior is ideal for airport curbside drop-offs, parking enforcement, suspicious parking, traffic lane breakdowns, and vehicles waiting at gates.

Value-based Network Dome System

Pelco breaks the performance versus affordability barrier with the very powerful, cost-effective Spectra Professional Series of discreet, integrated camera dome positioning systems. The Spectra Professional Series delivers clear, live streaming, high-definition images over the Internet using a standard Web browser (Microsoft® Internet Explorer® Chrome or Mozilla® Firefox®). With six times the resolution of standard definition domes, Spectra Professional is an ideal solution to view details such as faces, license plates, tattoos, or other specific features when in a zoomed-in position.

Spectra Professional supports High-Profile H.264 compression, a vast improvement in quality over MPEG-4 and 20 times more efficient than MJPEG. The dome system features open architecture connectivity for third-party software recording solutions allowing integration into virtually any IP-based HD system. It is also compatible with Digital Sentry® video management systems. As with all Pelco IP camera solutions, Spectra Professional is Endura Enabled™ to record, manage, configure, and view multiple live streams. When connected to an Endura® HD network-based video security system, the dome system has access to EnduraStor™ and EnduraView™ for optimized image quality and bandwidth efficiency.

Spectra Professional Series features ease of installation and ease of maintenance that you have come to expect from Pelco. Each dome system consists of a back box, a dome drive, and a lower dome, all prepackaged as a system.

Spectra Professional Series includes a choice of four back box models: in-ceiling, environmental in-ceiling, pendant, and environmental pendant. All environmental models meet Type 4X, IP66 when properly installed.

Built-In Analytics

Pelco video Analytics enhance the flexibility and performance of Spectra Professional. Two preloaded Pelco behaviors are included as standard features and can be configured and enabled using a standard Web browser. They are compatible with Endura or a third-party system that supports alarms using Pelco's API.

- **Motion Detection:** Detects and tracks objects that enter a scene and then triggers an alarm when the objects enter a user-defined zone. This behavior is primarily used in outdoor environments with light traffic to reduce the number of false alarms caused by environmental changes.
- **Camera Sabotage:** Detects contrast changes in the field of view. An alarm is triggered if the lens is obstructed by spray paint, a cloth, or a lens cap. Any unauthorized repositioning of the camera also triggers an alarm.

Web Interface

Spectra Professional uses a standard Web browser for powerful remote setup and administration.

Window Blanking

Window blanking is used to conceal user-defined privacy areas that cannot be viewed by an operator. Spectra Professional Series supports up to 8 blanked windows. A blanked area will appear on the screen as a solid gray window.

Video Systemization

Spectra Professional Series easily connects to Pelco IP and hybrid systems.

Spectra Professional Series features open architecture connectivity to third-party software. Pelco offers an application programming interface (API) and software developer's kit (SDK) for interfacing with Pelco's IP cameras.

RECOMMENDED MOUNTS

IWM-SR, IWM24-SR	Wall mount, with or without integral 24 VAC, 100 VA transformer; can be adapted for corner, parapet or pole application
WMVE-WH	Indoor wall mount; white finish. Can be installed directly to a wall or any vertical surface. Power and video wiring can be routed through the back of the mount or through the conduit access located on the bottom of the mount arm. Can also be polemounted using a PA101 pole mount adapter.
WMVE-SR	Environmental wall mount; light gray finish. Can be installed directly to a wall or any vertical surface. Power and video wiring can be routed through the back of the mount or through the conduit access located on the bottom of the mount arm. Can also be pole-mounted using a PA101 pole mount adapter.
MRCA	Ceiling mount, black
PP4348	Parapet roof mount
PP350/PP351	Parapet wall/roof mount

OPTIONAL ACCESSORIES

MCS Series	Indoor, 24 VAC power supply
WCS Series	Outdoor, 24 VAC power supply
POE1AT-US	Single-port PoE midspan with US power cord
POE1AT-EU	Single-port PoE midspan with European power cord

Refer to individual power supply specifications for more information.

Sarix® IBP Series Environmental Bullets

UP TO 5 MP, H.265, H.264, WDR, D/N IP BULLETS WITH INTEGRATED IR

Product Features

- H.265, H.264 Main, High, MJPEG video encoding
- Up to 5 MP resolution at 30 images per second
- Up to 60 images per second (ips) at 4 MP for 5MP cameras
- Autofocus motorized remote zoom lens
- IR illumination up to 50/60/80 meters (for different lenses)
- Operating temperature up to 60°C (140°F)
- Micro SDHC and SDXC card 2 TB addressable, 128 GB testable
- Basic Analytics including Simple Motion Detection and Camera Sabotage
- 24 VAC, 12 VDC, IEEE802.3af (PoE) or IEEE802.3at (PoE+)
- Pelco Smart Compression Technology
- Vandal resistant to IK10, IP66/67 ingress protection
- Compatible with Pelco & third-party video management systems
- ONVIF Profile S, Profile G, Profile Q, and Profile T conformant
- Full 3-year warranty

Sarix Professional Range

Powerful, versatile, and affordable, the **Sarix® Professional (P)** range cameras pack the most popular features and functionality of Sarix technology into a wide range of indoor and outdoor options, including bullet cameras and domes. There is also a vandal resistant wedge and box. Mix and match the performance options and form factor you need for almost any lighting condition, environment, and application.

IBP Series Bullet Camera

Within the **Sarix Professional** range, the **Sarix IBP Series** outdoor bullet cameras provide options of three kinds of a remote zoom lens for wide angle or long range surveillance needs. Autofocus capability ensures the camera can be automatically refocused when needed. Additionally, the **Sarix IBP Series** features advanced color science, true WDR, and advanced integrated adaptive IR illumination for visibility in different lighting conditions. IK10, IP66/67, and Type 4X compliance ensure enough robustness for challenging environments.

Video

Sarix Professional provide options of three kinds of simultaneous video streams. The three streams can be compressed with efficient H.265, H.264 High or Main profiles, or MJPEG formats. The streams can be configured to a variety of frame rates and variable bit rates to optimize image quality with bandwidth and storage efficiency. Pelco Smart Compression is available on both H.264 and H.265, minimizing storage and bandwidth utilization.

Edge Storage

Sarix Professional range cameras feature onboard edge storage with a micro SDHC and SDXC card. Video clips of varying lengths can be stored to the card upon alarm, or video can be written continuously to the SD card in the case of network outage. Video can be retrieved from the card through the FTP protocol or by using an ONVIF Profile G compliant client.

Open and Integrated

Sarix Professional range cameras seamlessly connect to Pelco video management systems such as VideoXpert™, VXToolbox, Endura® version 2.0 (or later), and Digital Sentry® version 7.3 (or later). **Sarix Professional** range cameras integrate with major third-party systems through the open Pelco API or the ONVIF Profile S, Profile G, Profile Q, and Profile T standards.

Standard Web Interface

Pelco cameras use a standard Web browser interface for easy remote setup and administration. Controls are optimized for convenient one-step camera configuration for features including color, exposure, flicker control, backlight compensation, and streaming.

BASIC ANALYTICS

Sarix Professional range cameras feature basic video analytics including Simple Motion Detection and Camera Sabotage.

Simple Motion Detection algorithms allow the camera to record or send an alarm when there is motion detected in a selected zone or with the entire scene.

A Camera Sabotage alarm is triggered if the lens is obstructed or when the camera is repositioned.

PELCO'S SMART COMPRESSION TECHNOLOGY

Pelco's Smart Compression Technology lowers bandwidth and storage requirements by up to 70%. Our technology allows the user to make informed optimization between storage savings and image quality.

Pelco's Smart Compression Technology dynamically analyzes motion occurring within live video in real-time, to intelligently compress the information you don't need, while retaining details with clear quality in the areas that are important in the scene. By enabling Dynamic GOP, an added feature of Smart Compression, the number of I-frames are automatically reduced in scenes with low motion. Based on the complexity of scenes and the extent of motion, up to 70% bandwidth savings can be achieved.
