Dear Jan,

Re: AMBER 6.1 Installation and USB Key

Thank you for purchasing a full perpetual AMBER licence for SÚRAO. Please find a tin enclosed that contains:

- ▲ a blue USB hardware security key (dongle) for AMBER, and
- ▲ a white Quintessa memory stick that contains the AMBER 6.1 installation.

Installation:

Please run the AMBER installation, attach the new dongle and then launch AMBER 6.0. The new dongle should work without the need to separately install drivers. You are free to make other use of the white Quintessa memory stick afterwards. The installation has been tested on Windows 10, Windows 7 and Windows Vista.

Maintenance and Support Agreement:

The new licence is provided with one years' software maintenance and user support. This entitles SÚRAO to at least one software upgrade and to remote support in the use of AMBER. The maintenance and support agreement will expire in November 2017. We will write in advance of the expiration to ask if SÚRAO would like to extend the maintenance and support agreement.

Feedback:

We very much welcome feedback about AMBER and ideas for further developments. Note that we also provide training in safety assessment and in the use of AMBER.

Please do not hesitate to contact Laura or myself if you have any questions about any of the above, or about AMBER and its application in general.

Yours sincerely,

Russell Walke
