Notice	This document is part of the Operational Manual of 4M MC and is governed by Change Control. Any change to this document shall follow the 4M MC Change control procedure. The content of this document might have evolved by the time you read or use this document. Please contact the 4M MC OPSCOM to check that this is the latest version before using this document.

1. Introduction

As soon the PMB Gate Closure Time has been reached and the PMB has received all the Order Data and all the Network Data from all PXs, the calculation will start automatically. Once the calculation is finished, the Coordinator's PMB will send the results to the other PMBs for the Preliminary Confirmation of the Results.

In case the calculation is extended after the Time Limit ▮▮▮▮▮▮▮▮ or if the Calculation cannot be performed due to validation or technical problem, the PXs will apply the relevant backup solutions as described in this document.

1.1. Purpose

The purpose of this procedure is to describe the applicable backup solutions in case a problem occurs during one of the following stages:

- ○ Validation of the Order Data or Network Data by the Algorithm;
- ○ Market Coupling Calculation;
- ○ Validation of the Results by the Algorithm.

1.2. Governed / Regulated by

2. Procedure

2.1.   General overview

This backup procedure must be done by involved PX or SP in case of a problem during calculation process. The Target Time indicated in the table is the Latest Time by which the operator has to start performing a backup action. ████████████████████████████████
