Annex No. 5: Standard conditions of use and storage conditions

Conditions of use and storage:

- In originally sealed IQ Structures packaging
- Storage temperature: 5°C – 30°C
- Keep dry
- Relative humidity: max 70%
- Absence of sunlight and other sources of UV light
- Absence of chemical compounds capable of deteriorating the properties of polycarbonate such as ammoniac, amines, aromatic hydrocarbons.

Storage time:

IQ Structures claims that for a period of one year which shall start on the day of the acceptance of the relevant delivery in respective transport documents, the product will meet the agreed properties, provided that the product is stored in full compliance with the storage conditions set above and is otherwise handled appropriately.

The span of one-year period does not mean that the product no longer meets specifications or the set values. However, prior to using the delivered product, IQ Structures recommends testing such product to make sure it still meets the set requirements or values. IQ Structures shall not be held responsible in any way for the product failing to meet the agreed properties after the span of the one-year period.

Sincerely

Robert Dvořák
