

the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.1 billion to 1.5 billion.

As the world's population grows, the demand for food and other resources will increase. This will put pressure on the environment and on the world's food supply.

One way to meet this demand is to increase the amount of food that is produced. This can be done by using more land for agriculture.

Another way to meet this demand is to increase the efficiency of food production. This can be done by using better farming techniques.

There are many ways to increase food production and efficiency. It is important to find ways to do this that do not harm the environment.

One way to do this is to use sustainable agriculture. This is a type of farming that uses natural resources in a way that can be maintained over time.

Sustainable agriculture can help to increase food production and efficiency while also protecting the environment.

There are many other ways to increase food production and efficiency. It is important to find ways to do this that do not harm the environment.

One way to do this is to use sustainable agriculture. This is a type of farming that uses natural resources in a way that can be maintained over time.
