the 1990s, the number of people with diabetes has increased in all industrialized countries. In the Netherlands, the prevalence of diabetes is estimated to be 6.5% in 1995, which corresponds to 1.5 million people (1).

Diabetes is a chronic disease with a high prevalence of complications. The most common complications are retinopathy, nephropathy, neuropathy, and cardiovascular disease. The prevalence of these complications is high, and the mortality is high. In the Netherlands, the mortality of diabetes is estimated to be 10% per year (2).

The prevalence of diabetes is increasing in all industrialized countries. In the Netherlands, the prevalence of diabetes is estimated to be 6.5% in 1995, which corresponds to 1.5 million people (1). The prevalence of diabetes is increasing in all industrialized countries. In the Netherlands, the prevalence of diabetes is estimated to be 6.5% in 1995, which corresponds to 1.5 million people (1).
