5 Optimization tool for thermal design (Product)

01/03/2025–31/08/2026

The development of the optimisation tool will be supported by the collaboration of the partner universities involved through the exchange of knowledge and data through monthly online meetings and organised events and conferences. Creation of the optimization tool that will gather the necessary information from the BIM model (areas, volumes, materials, compositions, properties, etc.) obtained from building surveys, measurements or laser scanning. The tool will be able to assess the different options for the renovation of the envelope of prefabricated buildings and find the optimal solution designed based on the given criteria (e.g. thermal resistance, LCA and sustainability, financial cost, load capacity and structural safety). A part of this task will be the creation of BIM models of the precast buildings, which includes a building survey, measurements and laser scanning on the site.

People interested in learning about the design optimization methodology and testing the application on real structures will be publicly informed through websites, social media and open-access articles. The website will be written in all languages of the participating countries and in English. They will also be able to participate in public events and conferences.

Role of the applicant and project partners

The task of the Polish partner is to determine the real dimensions of the selected precast buildings. The task of the applicant in this output is to create BIM models of the precast structures, which will be used to design variants of thermal engineering solutions for the building envelope (cooperation of all partners according to local possibilities and sources). The Slovak partner will provide a static analysis of the possible variants and the Hungarian partner will use the proposed variants to optimize and find the best solution with respect to thermal resistance, LCA and sustainability, financial costs and structural safety.
