RE: MT Model Generation

From: [REDACTED]

[REDACTED]

I am writing to follow up on our earlier discussions concerning a new study that I would like to initiate, which leverages EarthArray data to re-model specific regions in the western US. If possible, I would like to initiate proof-of-concept modeling so that I can integrate with an ongoing NSF-funded project utilizing remote sensing hyperspectral data.

As we discussed, it would be good if I was able to contract this work through your research group. If you are able, please feel free to provide me with an invoice for the estimated cost to complete these early-stage models. My budget for this initial phase is up to \$4850 USD. If you could provide an estimated cost for this work, that would be ideal.

Please let me know what further information you may need and, once you have the framework sorted, I can share the shapefiles for the specific geographic regions of interest.

Please feel free to reach out if you have any questions or concerns.

I am looking forward to our collaborations on this project. I know the results will provide impactful insights into critical mineral and geothermal systems that will yield impactful publications.

Sincerely,

[REDACTED]

I confirm the order 03.12.2025
