Subject: FW: quote request

Hi,
I have this one only. Is it enough? We are going for second option with more mirrors.
Roman

Subject: RE: quote request

Roman,

Here there is the updated quote including 2 options on the quantities.

We consider the custom substrate at the size requested and low scattering polishing.

Please let me know your feedback.

Regards,
Vito

Objet : RE: quote request

Hello Roman,

Ok I will updated the quote accordingly.

Regarding the LT, I think there is a misunderstanding ☺. These are "Lead Times", in weeks. So we need 6-8weeks to produce the parts from the moment of order.

Regards,
Vito

Objet : RE: quote request

Dear Vito,

I have checked your suggested substrates and unfortunately they are too thin.

As for Qty, we would like to have more flat mirrors, 6 pcs.

In principle we could also have an additional one of each curved mirror, but we would rather not do it unless it is a good offer.

Please send me two separate quotes with quantities as follows and I will prepare the order depending on our internal decision.

Item nr.	Qty for quote 1	Qty for quote 2
1	3	3
2	2	3
3	2	3
4	2	3
5	2	3
6	6	6

I have another question though which bothers me. In your offer the LT is 6-8 W, I suppose this is an average power of laser damage threshold. Could you please comment on that? It is quite unusual to quote the damage threshold in average power, what were the test conditions? We are planning to put through ~12-15 mJ at 1kHz, which is equal to 12-15W..

Many thanks,

Roman

Subject: RE: quote request

Roman,

We are checking how to reduce the cost for this request.

Please could you see if you may indeed chose any of these standard substrates in the list below? (these are low scattering polished)

catalog flat substrates

http://www.global-optosigma.com/en_eu/Catalogs/pno/?from=page&pname=OFB%2FOFBP%2FOFSQ%2FOFPXP%2FOFSQP-C&cocode=W3134&dcode=W3134-1

catalog concave substrates

http://www.global-optosigma.com/en_eu/Catalogs/category/?from=page&lv=4&name=Concave+mirror+substrate+for+laser

Also please give me the max qty you may accept for each element.

With these two info I will prepare a best quote for this request.

Regards,

Vito

Dear Vito,

We have evaluated the quote and are finalizing the design of the system and double checking if we did not miss anything. The procurement department will decide on the purchase procedure soon.
Thank you for the provided explanation. Maybe it would be useful to hear from your side some comments on the size of the substrates and quantities of optics in the batch during the coating that could make the order easier/faster/cheaper to manufacture. We might also consider ordering additional spares if there is extra space in the coating chamber.

Many thanks,
Roman

Hello Roman,

I am back in the office and we can work on your request.
Do you have any feedback on the offer Guy sent you?

Production raised the prices this time due to the low scattering substrate (learning from previous experience) and due to the lower quantities of pieces.

Regards,
Vito

Dear Roman

Please see the attached quote for the low GDD mirrors requested on 30/JUNE.

Now Optosigma factory has better experience in coating on your request low GDD mirrors I hope they fit perfectly to your inquiry.

- We quoted same coating as previously delivered OPCPA case.
- All pricings are carefully reviewed and has reflected our actual cost for this type of mirrors.
- This pricing is valid when (6) kinds and (14) total number mirrors ordered together.
- We implemented low scattering polishing.
- The coating simulation is also attached.

Let me know if you have any questions.

Best regards
Guy

Roman,

Ok I sent the specs to the coating department.
I will let you know as soon as I have a feedback.

Since there was some re-working on the previous parts, to avoid confusions it will be great if you can give me an exact reference of the parts we already delivered which you want the coating to be the same.

Best regards,

Vito Roppo, Ph.D.

Dear Vito,
Could you please send me a quote for low GDD mirrors according to the attached specifications?
The coating specifications are similar as for the optics that we have ordered before.
Many thanks,
