<u>Annex 1 – List of Projects of the ODA in the Area of Technical Standardisation in</u> <u>Bosnia and Herzegovina</u>

"Support for the Capacities of the Institute for Standardisation of Bosnia and Herzegovina in the Implementation of EUROCODES" (2014–2017, Bosnia and Herzegovina)

- see Logical Framework Matrix in Annex 2 hereto

Budget measure: Support of capacities of the Institute for Standardisation of Bosnia and Herzegovina in the implementation of EUROCODES

Implementation period: 2014–2017 Project promoter: The Czech Office for Standards, Metrology and Testing (ÚNMZ) Local partner organisation: Institute for Standardisation of Bosnia and Herzegovina, Vojvode Radomira Putnika 34, 71 123, Istočno Sarajevo, Bosnia and Herzegovina, <u>www.bas.gov.ba</u>

2014 Budget: CZK 3,000,000 2015 Budget: CZK 2,000,000 2016 Budget: CZK 4,000,000 2017 Budget: CZK 1,999,342

The project is focused on supporting the capacities of the Institute for Standardisation of Bosnia and Herzegovina in the areas of implementing, translating, creating and preparing national annexes of principles for the design of building structures - EUROCODES. EUROCODES are unified European standard documents for the design of building and civil engineering structures with respect to the stability and mechanical and fire resistance, namely as regards various types of structures, materials used, etc. With the implementation of EUROCODES, Bosnia and Herzegovina (B&H) will become one of the European countries with a unified procedure for the design of construction works, and to a certain extent, will thus also provide a solution to the current unsatisfactory state in the given area that had arisen after the breakup of the former Yugoslavia, in which neither national regulations nor an integrated system of national normative documents exists. The implementation of EUROCODES in Bosnia and Herzegovina will clarify procedures and conditions for the design of construction works for Czech and other European companies operating in the construction sector in this region, will repeal conflicting technical standards, and will enable companies to carry out their business activities on the basis of the principles applicable in the EU that are well known to them. The implementation of EUROCODES in Bosnia and Herzegovina will unequivocally increase the reliability of building structures built according to the principles applicable today.

"Support for the Application of the Principles of Free Movement of Goods and Improvement of the Safety of Products Introduced onto the Market in Bosnia and Herzegovina" (2012–2013, Bosnia and Herzegovina)

- see Logical Framework Matrix in Annex 3 hereto

Budget measure: Support for the Application of the Principles of Free movement of Goods and the Improvement of the Safety of Products Introduced onto the Market in Bosnia and Herzegovina

Implementation period: 2012–2013

Project promoter: The Czech Office for Standards, Metrology and Testing (ÚNMZ) Local partner organisation: Ministry of Foreign Trade and Economic Relations (MOFTER), Musala 9, 71000 Sarajevo, Bosnia and Herzegovina, <u>www.mvteo.gov.ba</u>

2012 Budget: CZK 2,960,000 2013 Budget: CZK 2,960,000

The focus of the project is to gradually build a network of testing laboratories comparable to those operating in EU member-states and which would achieve results applicable in EU countries. A step towards achieving this goal is to obtain accreditation from selected laboratories in B&H. The project aims at improving the current unsatisfactory state of the infrastructure of testing laboratories and quality assurance in Bosnia and Herzegovina by providing both the required know-how and technical facilities (equipment for testing laboratories).
