

## SENSOR MOBILE SUPPORT

### Technical datas :

- Weight : 11 kg
- Height between 0 cm to 200 cm
- Footprint : H120 x 60 x 60 cm
- Compatibility :  
DR sensors  
CR cassettes  
Standard cassettes (film)
- Fail protection

- New mobile support for DR sensors or CR cassettes, as well as for the standard cassette (film) will get you the position desired of them quickly and easily.
- The mobile support is very versatile and can be used in all services where you will need to do X-rays: emergency, operating room, bedroom, in radio rooms, etc...
- The mobile support is especially suitable for examinations that need to be taken slightly below or above the table top, a stretcher, a wheelchair or bed. Very handy for reviews of ankles, feet, knees but also for all other body parts.
- Its sub-structure down (foot) gives it great stability, made of steel 6 mm thick with an epoxy finish (stove enamelled). The wheels of a diameter of 100 mm give it great maneuverability.
- The vertical movements are telescopic, the system is light enough not to need the jack type of assistance or counterweight, often recognized for mechanical problems generating technician interventions.
- His kneecap for positioning the sensor in any desired inclinations. The double arm allowing flexible adjustment, fast and precise depth of the sensor, all this in order to allow each user of the possibilities of optimal configurations.
