Dear Bohlin,

two options, chiller or recirculator. With recirculator you cant go bellow ambient temperature with cooling water.

Recirculator EXT-440                      650,- Euro

- this is usually more that OK for Zyla (if ambient temperature is not too high), but Im not sure if it will handle two cameras. Especial when both will run at or close to max. speed

Chiller Oasis 160                      3.350,- Euro

<http://www.andor.com/accessories/chillers-recirculators>

Shipment: 55,- Euro. Prices are without VAT.

Best regards

Ales

Hi Ales,

We need some type of water chiller/recirculator to use with the Zyla cameras we bought from you (it needs to be able to provide cooling for both cameras at the same time). If you have something like that, could you please send me a quote?

Thank you  
Hannes
